

RML - RobotMetaLogger - Support #145

Documentation additions DRAFT

2013-02-19 00:38 - Florian Lier

Status:	New	Start date:	2013-02-19
Priority:	High	Due date:	
Assignee:	Florian Lier	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	0.01 hour
Description			
I would like to add:			
+ Install (Debian Dependencies): sudo apt-get install python-opencv in any other case rml init will fail like:			
<pre>flier@m0thership:~/Projects/Ongoing/RML/data\$ /home/flier/Projects/Ongoing/Gar-Trunk/bin/rml init Traceback (most recent call last): File "/home/flier/Projects/Ongoing/Gar-Trunk/bin/rml", line 5, in <module> pkg_resources.run_script("RobotMetaLogger==0.4", 'rml') File "/usr/lib/python2.7/dist-packages/pkg_resources.py", line 499, in run_script self.require(requires)[0].run_script(script_name, ns) File "/usr/lib/python2.7/dist-packages/pkg_resources.py", line 1239, in run_script execfile(script_filename, namespace, namespace) File "/home/flier/Projects/Ongoing/Gar-Trunk/lib/python2.7/site-packages/RobotMetaLogger-0.4-py2.7.egg/EGG-INFO/scripts/rml", line 40, in <module> import rml.config, rml.probes File "/home/flier/Projects/Ongoing/Gar-Trunk/lib/python2.7/site-packages/RobotMetaLogger-0.4-py2.7.egg/rml/probes/__init__.py", line 52, in <module> from opencv.camera import OpenCVProbe File "/home/flier/Projects/Ongoing/Gar-Trunk/lib/python2.7/site-packages/RobotMetaLogger-0.4-py2.7.egg/rml/probes/opencv/camera.py" , line 10, in <module> import cv</pre>			
+ In case you have chosen a custom \$prefix (./configure --prefix=/some/custom/path), extend your PYTHONPATH like the following:			
<pre>export PYTHONPATH=\$PYTHONPATH:/some/custom/path/lib/python2.7/site-packages</pre>			

History
