

Cognitive Interaction Toolkit - Bug #309

Blank Ubuntu 12.04 does not feature build-essentials | corrected jre-to-jdk package

2014-10-17 16:57 - Florian Lier

Status:	Closed	Start date:	2014-10-17
Priority:	High	Due date:	
Assignee:	Florian Lier	% Done:	100%
Category:	distinstaller	Estimated time:	2.00 hours
Target version:	Toolkit 0.1	Spent time:	2.10 hours
Description			
In order to bootstrap our toolchain, jdk instead of jre is needed (otherwise you dont have a Java compiler ;)). Also gcc is missing, therefore build-essentials is now in the list of basic packages			

History

#1 - 2014-10-17 16:58 - Florian Lier

Installed blank VM and tested.

#2 - 2014-10-17 16:58 - Florian Lier

- Status changed from Resolved to Closed

#3 - 2014-10-17 17:13 - Jan Moringen

Please update wip-platform-requirements branch accordingly.

#4 - 2014-10-17 17:17 - Florian Lier

...should this go? These packages must be installed *before* you even use the build generator. At this point, it is only mentioned in the tutorials. So, basically we need to add those packages to EVERY distribuion. Is that what you mean?

#5 - 2014-10-17 19:28 - Jan Moringen

At least requiring JDK instead of JRE applies specifically to *projects that compile* Java code, not the build-generator, Jenkins or the installer script.

I'm not sure why we want build-essentials, but I suspect it to be not necessary for build-generator, Jenkins or the installer script as well.
