Target version:	Toolkit 0.1	Spent time:	0.00 hour
Description			
<h3>Setup</h3> <ul style="list-style-type: none">• Same as in Issue #333			
<h3>Issue</h3> <p>When running the job-configurator and some repository credentials are wrong/missing, it hangs forever without giving a warning/error.</p> <p>I know this is a feature to some extent, but this is actually really annoying because in order to find the repo which is causing this, the users will do:</p> <ol style="list-style-type: none">1. Start the job-configurator2. Wait3. Realise the job-configurator does not continue - abort4. Restart with --debug5. Wait6. Realise there are 8 jobs in parallel and abort again, as console output will not help here7. Restart with --debug -j 18. Wait9. Find the repository which is causing this effect - fix and restart the configurator normally10. Wait11. Realise that there is another repo causing issues12. Go to 1. -.- <p>yeah, there is a lot of waiting involved :/</p>			
<h3>Fix Proposal</h3> <ul style="list-style-type: none">• Have a max timeout for the repos & show an error for• A better overview of the pralell jobs (rsb-logger timeline/scope style would be so nice!)• A commandline switch to control this			
Thanks <3
